

WINGMAN

**SPREAD YOUR WINGS AND FLY**

# WINGMAN

## MEET HOT BIRD SINGLES TODAY

Birds. There are alot of them. With such a huge amout of feathered friends out there some are bound to fall through the cracks. As birds, we know that finding a mate is priority one in the avian world and if you (as a bird) are having trouble filling out the nest we have you covered. Wingman is a dating site for birds, by birds. With our help, finding the perfect mate has never been easier. Fly on over and start a new chapter in your dating life. It's a breeze.

# WINGMAN

## WHAT A HOOT

The purpose of Wingman is to create a quick and easy solution for birds looking to find a perfect partner. We have a whole flock of hot single birds just waiting for you at the click of a button.

Our database of birds is as vast as the sky and constantly growing. Our system allows you to look up and find birds on your migration path, see what they're up to and comment on their profile to start chirping away. Make sure to use your own profile to make yourself the most attractive bird possible. The possibilities are endless.

# WINGMAN

## ACHIEIVING FLIGHT

### Technologies Implimented:

MERN Stack. React,  
GraphQL, Node.js, Express,  
MongoDB, Mongoose  
ODM, Heroku, CSS, APIs,  
JWT

We split the workload into back and front end. I worked on front end implementatio and styling and Lohmar and Caroline worked on the server.

Caroline and Lohmar filled out the seeds like all the bird feeders. dealt with the server implementation and mutations and setting up any APIs that they though would be cool. I tried to make things look good and connect it all together.

Like before, Putting all the parts together was insanely challenging. We all went through cycles of intense despair and relief pretty much each day. Personally I have to say I'm ready for a break at this point.

# WINGMAN

## STATE OF THE NEST

Now, please allow us a quick demonstration of our current build:  
Wingman v1.0.0:

# WINGMAN

## THE SKY IS THE LIMIT

To be honest we weren't able to implement all of our ideas in our current build of the prototype. There is still a lot that we can do to make our user experience much smoother and more useful. We still want to add a search by migration paths, like features, live online chat between users, better post features and more.

Our beaks were bigger than our stomachs with this one. We had big aspirations and tried to make our vision as real as possible but we're still not fully there. We have the will though. We're not going to stop here and we'll keep improving our site until it soars above the competition.
